

a ▲ Separately fitted DEBM

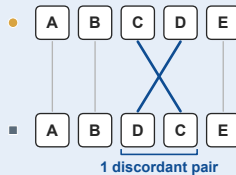

Abnormality model fitted per group →

Observed CN/MCI/AD proportions →

Orderings differ with composition

• CONCORD**One abnormality model fitted to the pooled sample****Weights give every group the same CN/MCI/AD proportions**

weight = common share ÷ group share
per diagnosis; marker area shows weight

Each group's ordering estimated from weighted scores

Distance between group orderings
(discordant event pairs)

b**Group labels permuted within diagnosis**
